

POWER BI Assignment - 5

① Explain DAX?

DAX is a collection of Functions, operators and constants that can be used in a formula, or expression, to calculate and return one or more values. stated more simply, DAX helps you create new information from data already in your model.

② how dataset, reports and dashboards relate to each other?

for a dashboard, it shows all the reports that have visualizations pinned to the dashboard and their associated data sets. for this dashboard, there are visualizations pinned from only one report and that report is based on only one dataset.

③ how reports created in power BI?

There are several ways to create reports quickly in power BI server. instead of downloading the power BI desktop app and importing the data. you can paste data straight into power BI on the web, and power BI automatically generates visuals for you.
